

General:

- Squeezing the resolution beyond 992 x 1182 pixel causes visual misplacing and overlapping
- Created rooms are being automatically deleted on a regular few minutes basis
- Pretty plain design (not a bug but worth mentioning)

Login and Logout

- Missing a successful login validation
- Missing wrong username/password validation
- User cannot use "Enter" button to login, just "click on Login button" is available
- No Logout validation
- No "eye icon" next to password input field to view what you're typing

Admin Page:

- Lack of room number symbols limitation - typing a longer room number causes overlapping and visual discrepancies
- Rooms can't be deleted
- Room number input field accepts any symbols (letters, digits, etc.)
- Typing a letter on the Price input field causes `status: 400, error: "Bad Request", path: "/room/"` and logout
- Selected Room details are working everytime just for the Single room type creation
- No validation message after successfully created room
- No validation message after successfully deleted room (while delete function was working)

Edit Page:

- No "Back button" on when opening a room
- Description input box has a pre-populated text which is not user-friendly
- There's still a preview image with a broken picture icon after the picture link has been deleted
- Entering a letter symbol on the price input field causes a white screen and non functional admin panel (error: "Bad Request" status: 400)
- No information regarding clients Name, Last Name, Price, Deposit paid, Check in and Check Out
